Founder & engineer · Miami, FL
malik.shourbaji@gmail.com · malikmakes.com
linkedin.com/in/malikthedev · github.com/malik1234567891011

Founder and engineer who puts software in front of real people. Co-founder of Glutt (Telora S26, Miami), an AI cooking companion for iPhone with paying customers. Built Daisy Weekly, which reached 1,000+ Montreal students in under a month. 1st place overall at JACHacks 2025.

EXPERIENCE

Glutt — Co-founder & Engineer · Miami, FL Jun 2026 – Present
AI cooking companion for iPhone: a live voice chef that can see what you're cooking, through the phone camera or Meta smart glasses. Telora S26 fellowship.

- Co-building the native iOS app (SwiftUI, SwiftData, local-first with Supabase sync) with co-founder Omar Lahlou; live on the App Store as a subscription product (StoreKit, Superwall) with paying customers.
- Developed the Meta smart-glasses integration: point-of-view camera and mic over Bluetooth and Wi-Fi feeding a realtime, interruptible voice chef that checks the pan before it answers.
- Built glutt.org and the funnel for in-home cooking sessions (Meta ads → booking → verified confirmation); run the \$109.99 two-hour sessions myself to watch real cooks use the product and fix what breaks.

Daisy Weekly — Co-founder & Lead Engineer · Montreal, QC Mar 2026 – Present
Student matchmaking with one deliberate constraint: one match, every Wednesday at 6 p.m.

- Reached 1,000+ students across 30+ Montreal campuses in under a month.
- Built the product end to end in Next.js, PostgreSQL (Prisma), NextAuth, Twilio Verify and SMS, and Vercel Blob.
- Designed the weekly matching pipeline: eligibility and compatibility rules, no-repeat pairing, suggested meeting spots and a deduplicated Wednesday SMS drop; contact details unlock only on mutual interest.

Talensight — Software Developer Intern · Montreal, QC Jan – May 2026
Shipped production features for an HR-assessment platform in Next.js, TypeScript and Firebase: a manager dashboard, reusable assessment job presets and internationalization.

Freelance Developer · Montreal, QC 2025 – 2026

- 7Sports — rebuilt the website of a youth sports organization running 270+ classes a season.
- Nour Transport — built an AI tool that pulls structured data out of invoice PDFs and fills internal forms, replacing manual data entry.

PROJECTS & AWARDS

Sentinel · 1st Place Overall, JACHacks 2025 — Watched Québec 511 traffic cameras for crashes (TensorFlow COCO-SSD), wrote incident reports with Gemini and called emergency services through Twilio. Team of four.

Savoir AI · MLH Best Use of ElevenLabs, JACHacks 2026 — Conversational tutor with a live avatar (Claude, ElevenLabs, HeyGen) that teaches through questions and draws the math with Manim.

Pharos · McHacks 13, 2026 — iOS driver-fatigue assistant: ARKit face tracking beside Mapbox navigation, with voice alerts.

Hangouts · 2024 – 2025 — Student events app for Montreal CEGEPs and universities; 500+ users.

EDUCATION

John Abbott College — DEC, Computer Science Technology · Montreal, QC 2023 – 2026

SKILLS

Engineering: Swift, SwiftUI, TypeScript, JavaScript, Python, SQL, React, Next.js, Node.js, PostgreSQL, Prisma, Supabase, Firebase, Vercel

AI & perception: realtime voice agents, multimodal vision, LLM tool use, computer vision (YOLO, TensorFlow, OpenCV), CLIP embeddings, FAISS

Hardware & distribution: Meta smart glasses, App Store, StoreKit, Twilio

Languages: English, French
